

Claims

1. A process for working up β -sulfatoethylsulfonylaniline-2-sulfonic acid from a solution in aqueous sulfuric acid, which comprises
5
a first step of the β -sulfatoethylsulfonylaniline-2-sulfonic acid being precipitated by addition of alkali or alkaline earth metal and/or ammonium salts, separated off and dissolved in water or the sulfuric acid being precipitated by addition of calcium salts and the resulting calcium sulfate being separated off if appropriate, and
10
a second step of the resultant solution being adjusted to a pH between 1 and 5 by addition of alkali or alkaline earth metal or ammonium hydroxide, carbonate, bicarbonate and/or acetate, any calcium sulfate still present being separated off and the β -sulfatoethylsulfonylaniline-2-sulfonic acid being isolated from the solution.
15
2. The process according to claim 1 wherein the β -sulfatoethylsulfonylaniline-2-sulfonic acid is precipitated by addition of 1 to 10 mol equivalents of sodium, potassium and/or ammonium salt in the first step.
20
3. The process according to claim 1 or claim 2 that utilizes sodium chloride, sodium sulfate, potassium chloride or potassium sulfate salt in the first step.
- 25 4. The process according to any of claims 1 to 3 wherein the β -sulfatoethylsulfonylaniline-2-sulfonic acid is isolated in the second step by precipitating with sodium, potassium and/or ammonium salts or by spray drying.
5. The process according to claim 4 wherein the β -sulfatoethylsulfonylaniline-2-sulfonic acid is isolated in the second step by precipitating with 1 to 10 mol equivalents of the salts.
30
6. The process according to claim 4 or 5 that utilizes sodium chloride or sodium sulfate as sodium salt and potassium chloride or potassium sulfate as potassium salt.
35
7. β -Sulfatoethylsulfonylaniline-2-sulfonic acid preparable by any of the processes according to claim 1 to 6.
